OCHIRTULGA "OCHI" NAMJIM

Senior Backend Engineer

Austin, TX | 737-334-5878 | ochirtulgan@gmail.com | linkedin.com/in/ochirtulga | github.com/ochirtulga

SUMMARY

Backend engineer with 7 years of experience building and scaling distributed systems across fintech and enterprise environments, supporting over 2 million users. Proven track record of improving reliability, performance, and delivery speed through Java/Spring services, event-driven architectures, and cloud-native DevOps practices. Delivered measurable outcomes, including 99.99% uptime, up to 10x performance gains, 50% API response time improvements, and major reductions in processing time and operational cost.

CORE SKILLS

Languages: Java, Python, SQL, JavaScript, TypeScript

Backend: Spring Boot, Spring Security, Spring Data, FastAPI, REST APIs, Microservices, Kafka, Node.js

Data: PostgreSQL, Oracle, MySQL, Redis, Cassandra, NoSQL, Data Modeling, Query Optimization

Cloud & DevOps: AWS (EC2, EKS, RDS, S3, SQS, SNS, Lambda, DynamoDB, IAM), Docker, Kubernetes, Jenkins, GitHub Actions, Ansible

Observability & Platforms: Grafana, Prometheus, ELK, Hadoop, Spark, Linux (RHEL/Ubuntu)

Testing & Quality: JUnit, Mockito, Spock, Pytest, CI/CD, Unit/Integration/Performance Testing

WORK EXPERIENCE

Software Engineer — June 2022 - March 2025

Thermo Fisher Scientific | Austin, TX (Fortune 500)

- Built an internal access management platform in Java, eliminating third-party licensing costs to near-zero and tightening security controls across the organization.
- Converted order history service from synchronous to asynchronous processing, improving API response time by 50%.
- Developed backend services for a regional quote workflow in Python with real-time Kafka notifications, enabling a new revenue stream.
- Designed middleware APIs bridging Java and Python services, reducing integration-related defects and improving cross-service reliability.
- Expanded automated test coverage across Java and Python services (JUnit, Mockito, Spock, Pytest), cutting post-deployment customer incidents by 10%.
- Integrated vulnerability scanning into CI/CD pipelines (GitHub Actions), preventing known security issues from reaching production.
- Optimized data pipelines and backend processing logic, improving maintainability by 20% and runtime performance by 10%.

Software Engineer — February 2018 - September 2021

Khan Bank | Ulaanbaatar, Mongolia (Mongolia's largest commercial bank)

- Led zero-downtime migration of customer-facing services, data pipelines, and reporting systems to distributed platforms, improving throughput by 10x and cutting licensing costs by 50%.
- Redesigned revenue-critical notification microservices with Kafka, achieving 99.99% uptime and reducing SLA downtime to under 20 minutes per year.
- Rebuilt loan scoring workflows using Hadoop, Spark, and microservices, reducing approval time from 3 days to 3 hours and accelerating credit decisions for 2M+ users.
- Automated operational workflows with Ansible and shell scripting, saving 20+ engineering hours per month.
- Mentored engineers on distributed platforms, data modeling, and query optimization, achieving 100% on-time delivery with zero production incidents during tenure.
- Optimized relational and non-relational data models and queries, improving system performance, scalability, and availability.

EDUCATION

American National University — Expected August 2028

Master of Science, Computer Science and Engineering | Salem, VA

Maharishi University of Management — Oct 2021 - Dec 2023

Master of Science, Computer Science | Fairfield, IA

Mongolian University of Science and Technology — Sep 2014 - Jun 2018

Bachelor of Science, Information Technology | Best Alumni | Ulaanbaatar, Mongolia

CERTIFICATIONS

AWS Certified — Valid through 2028

Apache Cassandra Developer — April 2019 | No Expiration
